

# Knowledge Plaza

KM for Information Professionals

## Sourcing Internal Information

Powered by Lucene, users are able quickly find information and create custom vertical searches in seconds.

- Find information by tag, full text, user, workspace or any combination of the above!
- Save any search or subscribe to RSS for information trapping.
- Create email digests for saved searches

## Sourcing External Information

Knowledge Plaza provides a single aggregation point for sourcing external information whether it's on the web, intranet or subscribed-to database.

- Custom google searches by categories of website (by tags, user, workspace)
- Light integration of all web based search locations (search engines, websites, databases)
- Light integration of intranet search resources (search engines, websites, databases)

## Cataloguing and Indexing

The platform supports emails, documents, images, video, references, websites, discussions and more. Information can be tagged, commented, sent, grouped and access controlled.

- tag, annotate, comment on and share all types of information
- all information is fully indexed and searchable
- workspaces, facets and tags aid discovery

## Analysis and Assertions

Comments can be left on any item inside Knowledge Plaza allowing the exploration of ideas, assertions and feedback around information items.

- leave comments and start discussions
- create wiki pages relating to information items and information packages
- reference and relate items

## Report Production

Information professionals are able to bundle information into packages for annotation, collaboration and brokerage. Packages can be exported to PDF detailing all assertions, information items and references. In addition all referenced artifacts are exported with the PDF.

- group information into packages
- create wiki pages to add context to information
- full export for sharing, brokerage or sale
